Towards Linear-time Incremental Structure from Motion

of matching time can be saved if we can identify the good pairs robustly and efficiently By exploiting the scales of invariant features [10], we propose the following preemptive feature matching for this purpose: 1Sort the features of each image into decreasing scale order This is a one-time $O(n)$ preprocessing

Real-Time Mobile Stereo Vision

Stereo vision is cheaper, completely passive, but computationally expensive, while LiDAR is relatively expensive, requires active laser projection, but requires much less processing This Thesis will focus on the real time general-purpose CPU calculation of computer stereo vision for a swarm of mobile robots using generic USB webcams
