F Florida's Venomous Snakes

Snakes, and their cousins the alligators, crocodiles, turtles and lizards, play an interesting and vital role in Florida's complex ecology. Many people have an uncontrollable fear of snakes. Perhaps because man is an animal who stands upright, he has developed a deep-rooted aversion to all crawling creatures. And, too, snakes long have been

Native Snakes of Rhode Island - West Bay Land Trust

Native Snakes of Rhode Island Although many cultures around the world respect snakes and revere them as symbols of renewal and fertility, in our society the relationship between humans and snakes consists of apprehension. Unfortunately, the fear that many people have for these leg-less members of the reptile family is

Snakes of Wisconsin by Wisconsin DNR

May 15, 2006 · Snakes of Wisconsin by Wisconsin DNR For centuries, snakes have been misunderstood, under-appreciated, and even heavily persecuted. However, most of us are enthralled with them and our natural curiosity seeks to better understand them. Snakes occur throughout most of the world and vary in length from 5 inches to more than 30 feet.

Venomous Snakes of South Carolina

This family of snakes contains some of the world's deadliest snakes including cobras, mambas and the Australian snakes such as the taipan and tiger snake. Coral snakes are not pit vipers, as are our other venomous snakes, and are quite different both in appearance and behavior from these snakes. Adult coral snakes can reach a length of 2 feet.

A Guide to Information and Identification of Kansas Snakes

- Most venomous snakes can jump at least 2 feet. Remember - snakes don't have legs! They can't jump.
- Snakes spit. Not the ones in Kansas. The clumps of foam-looking spittle found on blackberry bushes and vines in Kansas are often thought to be "snake spit," but the fact is, this foam is produced by Spittle Bugs.
- Snakes won't cross a

Snakes of New Jersey Brochure

The venomous snakes of New Jersey are feared the most due to mis-information and misunderstanding. Each year many non-venomous snakes are misidentified as venomous snakes and are killed needlessly, but all snakes in New Jersey are protected under the NJ Endangered and Nongame Species Conservation Act (NJSA 23:2A-1-13), which

Dangerous Venomous Snakes in Indonesia

The third family of venomous snakes, the colubrid or back fanged snakes includes garter snakes and vine snakes. These are generally dismissed as non venomous or non dangerous, however, there are at least two common species which have caused fatalities. Also, the toxicity of Colubrid venom is poorly understood by scientists.
