Designing Distributed Systems Feb 08 2021 Without established design patterns to guide them, developers have had to build distributed systems from scratch, and most of these systems are very unique indeed. Today, the increasing use of containers has paved the way for core distributed system patterns and reusable containerized components. This practical guide presents a collection of repeatable, generic patterns to help make the development of reliable distributed systems far more approachable and efficient. Author Brendan Burns—Director of Engineering at Microsoft Azure—demonstrates how you can adapt existing software design patterns for designing and building reliable distributed applications. Systems

engineers and application developers will learn how these long-established patterns provide a common language and framework for dramatically increasing the quality of your system. Understand how patterns and reusable components enable the rapid development of reliable distributed systems Use the side-car, adapter, and ambassador patterns to split your application into a group of containers on a single machine Explore loosely coupled multi-node distributed patterns for replication, scaling, and communication between the components Learn distributed system patterns for large-scale batch data processing covering work-queues, event-based processing, and coordinated workflows

Embedded and Networking Systems Oct 07 2020 Embedded and Networking Systems: Design, Software, and Implementation explores issues related to the design and synthesis of high-performance embedded computer systems and networks. The emphasis is on the fundamental concepts and analytical techniques that are applicable to a range of embedded and networking applications, rather than on specific embedded architectures, software development, or system-level integration. This system point of view guides designers in dealing with the trade-offs to optimize performance, power, cost, and other system-level non-functional requirements. The book brings together contributions by researchers and experts from around the world, offering a global view of the latest research and development in embedded and networking systems. Chapters highlight the evolution and trends in the field and supply a fundamental and analytical understanding of some underlying technologies. Topics include the co-design of embedded systems, code optimization for a variety of applications, power and performance trade-offs, benchmarks for evaluating embedded systems and their components, and mobile sensor network systems. The book also looks at novel applications such as mobile sensor systems and video networks. A comprehensive review of groundbreaking technology and applications, this book is a timely resource for system designers, researchers, and students interested in the possibilities of embedded and networking systems. It gives readers a better understanding of an emerging technology evolution that is helping drive telecommunications into the next decade.

Mentoring in the Criminal Justice Professions Aug 17 2021 The tradition of moving from one job to another in the criminal justice profession with the belief that on departure a new person will be brought in to assume the duties of his or her predecessor is archaic and ineffective. It is rare to replace someone and have the benefit of his or her counsel and experience in learning the nuances of the job and its responsibilities. Mentoring provides a framework, whether informal or formal, to interact, support, transfer knowledge, and guide the protégé to the desired goal. This book provides a blueprint of mentoring theory and practice, testing, evaluation.

Pathway to Adaptability Jun 22 2019 Building the Foundation for the Smart Enterprise Business enterprises must capitalize on market opportunities, provide current customers with exemplary service, develop new products, control costs and reduce lead-times. One of the key business strategies to

achieve these objectives is to develop a smart enterprise that changes information access and business response from weeks and days to hours and minutes. The foundational systems must provide accurate data if information is to be up-loaded into analytics to achieve decision support capability. These include ERP, Supply Chain, Engineering, CRM and Distribution systems that can be positioned to perform greater intelligence gathering and processing. Building the intelligent enterprise requires business systems capable of providing a stream of viable data to analytics. Analytics use the data gathered to produce the intelligence needed to everyone within the value chain. The Pathway to Adaptability was written as a tool to evaluate the capability of the current systems to support the adaptive enterprise and discusses ways to fix the broken components. Pathway to Adaptability is divided into core components. • The Lean concepts are put into executive terms and applied to governance. Creating the foundation for the intelligent enterprise starts with the Board of Directors and Executive management. They control the policies and strategies that drive the actions of the business. The board establishes the operating principles including those affecting employees. These latter policies determine how the employees will interact on issues such as flexibility, innovation and the application of Lean principles. • Systems concepts are applied to enterprise business and software systems. These concepts establish the foundation for the integrated convergence of markets, systems, processes, and products. • The eight-step approach builds on the Lean and Enterprise Information structures to summarize the process any company must travel to build adaptability. This book is must reading for those who need to understand how to build an adaptive, intelligent enterprise. One of the criteria was to keep it short by giving the readers credit for comprehension. The result is a fast read that summarizes a significant amount of relevant information. To order: Pathwaytoadaptability.com

Understanding the War Industry Apr 24 2022 "To an ever-increasing extent, the business of America is the business of war. But although Americans live in the shadow of a war economy, few understand the full extent of its power and influence. Thanks to Christian Sorenson's deeply researched book into the military-industrial complex that envelops our society, such ignorance can no longer be an excuse." - ANDREW COCKBURN, author of 'Kill Chain, The Rise of the High Tech Assassins.' "A devastating account of American militarism, brilliantly depicted, and exhaustively researched in an authoritative manner. Sorensen's book is urgent, fascinating reading..." RICHARD FALK "I'm adding Christian Sorensen's new book, *Understanding the War Industry*, to the list of books I think will convince you to help abolish war and militaries.." DAVID SWANSON *World Without War* "This meticulously researched book lays out in painstaking detail exactly how our nation has been captured by a war industry that profits from

endless conflict and pursues profit at all costs. It will shock you, infuriate you, and hopefully inspire you."MEDEA BENJAMIN, co-director, CODE PINK The War Industry infests the American economy like a cancer, sapping its strength and distorting its creativity while devouring its treasure. Stunning in the depth of its research, Understanding the War Industry documents how the war industry commands the other two sides of the military-industrial-congressional triangle. It lays bare the multiple levers enabling the vast and proliferating war industry to wield undue influence, exploiting financial and legal structures, while co-opting Congress, academia and the media. Spiked with insights into how corporate boardrooms view the troops, overseas bases, and warzones, it assiduously delineates how corporations reap enormous profits by providing a myriad of goods and services devoted to making war, which must be rationalized and used if the game is to go on: advanced weaponry, drones and nukes; invasive information technology; space-based weapons; and special operations—with contracts stuffed with ongoing and proliferating developmental, tertiary and maintenance products for all of it.
