This is likewise one of the factors by obtaining the soft documents of this **The Rise Of Network Society Information Age Economy And Culture Volume I Manuel Castells** by online. You might not require more time to spend to go to the book start as without difficulty as search for them. In some cases, you likewise realize not discover the statement The Rise Of Network Society Information Age Economy And Culture Volume I Manuel Castells that you are looking for. It will certainly squander the time.

However below, subsequently you visit this web page, it will be so categorically easy to get as skillfully as download lead The Rise Of Network Society Information Age Economy And Culture Volume I Manuel Castells

It will not resign yourself to many epoch as we tell before. You can attain it even though put-on something else at house and even in your workplace. therefore easy! So, are you question? Just exercise just what we find the money for below as without difficulty as review **The Rise Of Network Society Information Age Economy And Culture Volume I Manuel Castells** what you bearing in mind to read!

The Network Society Jul 04 2020 In a clear and rewarding style, Albrechts and Mandelbaum consider the challenges that the new paradigm of the Network Society creates for Urban and Regional Planning. Chapters grouped into five themes discuss theoretical and practical perspectives on the contemporary organization of social, economic, cultural, political and physical spaces. These sections are: models of the Network Society the impact of

physical networks such as transport challenges for Planners raised by society's increased reliance on new technology an examination of local networks including community networks and the possibilities of setting up local networks for disaster recovery a comparison of spatial and policy networks and an exploration of the institutions involved. This book is essential reading for graduate level courses in urban studies, city and regional planning, and urban design. With its clear structure - unitary sections but a diversity of perspectives - the book can be used easily in courses such as Planning Theory, Urban Infrastructure and Public Policy.

Social Networks and Surveillance for Society Jul 24 2019 This book focuses on recent technical advancements and state-of-the-art technologies for analyzing characteristic features and probabilistic modelling of complex social networks and decentralized online network architectures. Such research results in applications related to surveillance and privacy, fraud analysis, cyber forensics, propaganda campaigns, as well as for online social networks such as Facebook. The text illustrates the benefits of using advanced social network analysis methods through application case studies based on practical test results from synthetic and real-world data. This book will appeal to researchers and students working in these areas.

The Rise of the Network Society Oct 31 2022 This first book in Castells' groundbreaking trilogy, with a substantial new preface, highlights the economic and social dynamics of the information age and shows how the network society has now fully risen on a global scale. New preface demonstrates the network society has now fully risen on a global scale Groundbreaking volume on the impact of the age of information on all aspects of society Includes coverage of the influence of the internet and the net-economy Describes the accelerating pace of innovation and social transformation Based ...

The Internet Galaxy Mar 31 2020 Castells helps us understand

how the Internet came into being and how it is affecting every area of human life. This guide reveals the Internet's huge capacity to liberate, but also its possibility to exclude those who do not have access to it.

"The" Information Age Dec 21 2021

Learning In a Networked Society Jan 22 2022 One of the most significant developments in contemporary education is the view that knowing and understanding are anchored in cultural practices within communities. This shift coincides with technological advancements that have reoriented end-user computer interaction from individual work to communication, participation and collaboration. However, while daily interactions are increasingly engulfed in mobile and networked Information and Communication Technologies (ICT), in-school learning interactions are, in comparison, technologically impoverished, creating the phenomenon known as the school-society digital disconnect. This volume argues that the theoretical and practical tools of scientists in both the social and educational sciences must be brought together in order to examine what types of interaction, knowledge construction, social organization and power structures: (a) occur spontaneously in technology-enhanced learning (TEL) communities or (b) can be created by design of TEL. This volume seeks to equip scholars and researchers within the fields of education, educational psychology, science communication, social welfare, information sciences, and instructional design, as well as practitioners and policy-makers, with empirical and theoretical insights, and evidence-based support for decisions providing learners and citizens with 21st century skills and knowledge, and supporting well-being in today's information-based networked society.

The Network Society Apr 12 2021 'The Network Society stimulates the reader to think about the network society in an innovative way. Because of its analytical aims and a well-balanced presentation of empirical findings and theoretical insights coming

from a remarkable variety of authors, this is a book that might become a model for collaborative research in the years to come, as well as an invaluable reference for teaching and research on networking as an organizational form.' - International Sociology - Review of Books

Transnational Advocacy Networks in the Information Society Jun 02 2020 This book examines the role of transnational advocacy networks in enabling effective participation for individual citizens in the deliberative processes of global governance.

Contextualized around the international conference setting of the United Nations-sponsored World Summit on the Information Society (WSIS) in 2003 and 2005, the book sees epistemic communities and information and communication technologies (ICTs) as critical to the effectiveness of this important organizational form. Historically, governments have dominated the official “conference diplomacy” surrounding these World Summits. However, reflecting the UN General Assembly resolution authorizing WSIS, transnational civil society and private sector organizations were invited to participate as official partners in a multistakeholder dialogue at the summit alongside the more traditional governments and international organizations. This book asks: are transnational advocacy networks active in the global information society influential partners in these global governance processes, or merely symbolic tokens—or pawns? Cogburn explores the factors that enabled some networks—such as the Internet Governance Caucus—to persist and thrive, while others failed, and sees linkages with epistemic communities—such as the Global Internet Governance Academic Network—and ICTs as critical to network effectiveness.

The Rise of the Network Society Sep 29 2022 This first book in Castells' groundbreaking trilogy, with a substantial new preface, highlights the economic and social dynamics of the information age and shows how the network society has now fully risen on a global scale. Groundbreaking volume on the impact of the age of

information on all aspects of society Includes coverage of the influence of the internet and the net-economy Describes the accelerating pace of innovation and social transformation Based on research in the USA, Asia, Latin America, and Europe

End of Millennium Sep 25 2019 The final volume in Manuel Castells' trilogy is devoted to processes of global social change induced by interaction between networks and identity.

Information Warfare in Business May 02 2020 This book illustrates the relations between information technology and organization, and in particular, between business organizations and the recent revolution in military affairs that has been called 'information warfare'.

Pierre Musso and the Network Society Aug 05 2020 This book is devoted to discussion of the views of Pierre Musso and starts with a central chapter written by Musso, entitled Network Ideology: from Saint-Simonianism to the Internet . Pierre Musso is a French philosopher and is one of the most original thinkers in the history of the network society. His thought develops a critique of information and communication technologies through their imaginary and social representations and of the information society, based on the network metaphor. The main question on which Musso has focused his attention is how the network metaphor is one of the most powerful ways of understanding the complex societies in which we live. Showing characteristic attention to detail, and drawing on the history of ideas, political philosophy and sociology, Musso traces the genealogy of the network imaginary, and points out that it did not emerge with the Internet. He shows how its modern roots can be found in Henri de Saint-Simon and his disciples, engineers and entrepreneurs such as Michel de Chevalier, and Barthélemy Prosper Enfantin, who developed channel networks, railroads, and the telegraphic network in France in the nineteenth century. In addition to the central piece written by Musso, the book includes a general introduction and six commentaries from experts on information

technologies and networks. It displays a wide range of perspectives from a diverse set of authors in terms of nationalities and universities, as well as disciplinary backgrounds.

Configuring the Networked Self Aug 24 2019 The legal and technical rules governing flows of information are out of balance, argues Julie E. Cohen in this original analysis of information law and policy. Flows of cultural and technical information are overly restricted, while flows of personal information often are not restricted at all. The author investigates the institutional forces shaping the emerging information society and the contradictions between those forces and the ways that people use information and information technologies in their everyday lives. She then proposes legal principles to ensure that people have ample room for cultural and material participation as well as greater control over the boundary conditions that govern flows of information to, from, and about them.

The Early Information Society Oct 26 2019 Whether termed the 'network society', the 'knowledge society' or the 'information society', it is widely accepted that a new age has dawned, unveiled by powerful computer and communication technologies. Yet for millennia humans have been recording knowledge and culture, engaging in the dissemination and preservation of information. In 'The Early Information Society', the authors argue for an earlier incarnation of the information age, focusing upon the period 1900-1960. In support of this they examine the history and traditions in Britain of two separate but related information-rich occupations - information management and information science - repositioning their origins before the age of the computer and identifying the forces driving their early development. 'The Early Information Society' offers an historical account which questions the novelty of the current information society. It will be essential reading for students, researchers and practitioners in the library and information science field, and for sociologists and historians interested in the information society.

The Network Society Nov 07 2020 The Network Society; the essential guide to the past, current consequences and future of digital communication, remaining an accessible, comprehensive, must-read introduction to how new media function in contemporary society.

Media, Environment and the Network Society Jul 16 2021 The news media has become a key arena for staging environmental conflicts. Through a range of illuminating examples ranging from climate change to oil spills, *Media, Environment and the Network Society* provides a timely and far-reaching analysis of the media politics of contemporary environmental debates.

The Network Society Jun 26 2022 The Network Society is now more than ever the essential guide to the past, consequences and future of digital communication. Fully revised, this Third Edition covers crucial new issues and updates. This book remains an accessible, comprehensive, must-read introduction to how new media function in contemporary society.

The Network Society Apr 24 2022 This book explores the patterns and dynamics of the network society through its policies. Topics range from the knowledge economy, based on technology and innovation, to organizational reform and modernization in the public sector. The contributors also examine media and communication policies. Contributors include Jorge Sampaio (president of the Portuguese Republic), Manuel Castells (UCLA), Gustavo Cardoso (CIES/ISCTE, Portugal), Dale W. Jorgenson (Harvard University), Khuong M.Vu (Suffolk University), Luc Soete (UNU-INTECH and MERIT), Jane Fountain (University of Massachusetts-Amherst), James Katz (Rutgers University), Betty Collis (University of Twente, The Netherlands), Geoff Mulgan (Institute of Community Studies, London), Marcelo Branco (Brazilian Information Society), Jonathan Taplin (Annenberg School for Communication, University of Southern California), Imma Tubella (Open University of Catalonia, Barcelona), François Bar (Annenberg School for Communication, USC), Hernan

Galperin (Annenberg School for Communication, USC), Jeff Cole (Annenberg School for Communication, USC), William Mitchell (MIT), Erkki Liikanen (Bank of Finland), Pekka Himanen (Helsinki Institute for Information Society and University of California, Berkeley), Carlos Alvarez (secretary of state for the economy, Chile), and Maria João Rodrigues (ISCTE, University of Lisbon).

Privacy and Identity in a Networked Society Oct 19 2021 This book offers an analysis of privacy impacts resulting from and reinforced by technology and discusses fundamental risks and challenges of protecting privacy in the digital age. Privacy is among the most endangered "species" in our networked society: personal information is processed for various purposes beyond our control. Ultimately, this affects the natural interplay between privacy, personal identity and identification. This book investigates that interplay from a systemic, socio-technical perspective by combining research from the social and computer sciences. It sheds light on the basic functions of privacy, their relation to identity, and how they alter with digital identification practices. The analysis reveals a general privacy control dilemma of (digital) identification shaped by several interrelated socio-political, economic and technical factors. Uncontrolled increases in the identification modalities inherent to digital technology reinforce this dilemma and benefit surveillance practices, thereby complicating the detection of privacy risks and the creation of appropriate safeguards. Easing this problem requires a novel approach to privacy impact assessment (PIA), and this book proposes an alternative PIA framework which, at its core, comprises a basic typology of (personally and technically) identifiable information. This approach contributes to the theoretical and practical understanding of privacy impacts and thus, to the development of more effective protection standards. This book will be of much interest to students and scholars of critical security studies, surveillance studies, computer and information science, science and technology studies, and politics.

24/7 Sep 05 2020 24/7 is the first collection of essays dealing with the nature and our experience of temporality in the network society.

The Network Society Mar 24 2022 In *The Network Society*, Darin Barney provides a compelling examination of the social, political and economic implications of network technologies and their application across a wide range of practices and institutions. Are we in the midst of a digital revolution? Have new information and communication technologies given birth to a new form of society, or do they reinforce and extend existing patterns and relationships? This book provides a clear and engaging discussion of these and other questions. Using a sophisticated model of the relationship between technology and society, Barney investigates both what has changed, and what has remained the same, in the age of the Internet. Among the issues discussed are debates concerning the emergence of a 'knowledge economy'; digital restructuring of employment and work; globalization and the status of the nation-state; the prospects of digital democracy; the digital divide; new social movements; and culture, community and identity in the age of new media. This book provides an accessible resource for a thoughtful engagement with life in the network society. It will be essential reading for students in sociology and media and communication studies. This will be a valuable textbook for undergraduate students of sociology and media and communication studies.

Shaping the Network Society Aug 29 2022 How computer professionals and communities can work together to shape sociotechnical systems that will meet society's challenges. Information and computer technologies are used every day by real people with real needs. The authors contributing to *Shaping the Network Society* describe how technology can be used effectively by communities, activists, and citizens to meet society's challenges. In their vision, computer professionals are concerned less with bits, bytes, and algorithms and more with

productive partnerships that engage both researchers and community activists. These collaborations are producing important sociotechnical work that will affect the future of the network society. Traditionally, academic research on real-world users of technology has been neglected or even discouraged. The authors contributing to this book are working to fill this gap; their theoretical and practical discussions illustrate a new orientation—research that works with people in their natural social environments, uses common language rather than rarefied academic discourse, and takes a pragmatic perspective. The topics they consider are key to democratization and social change. They include human rights in the "global billboard society"; public computing in Toledo, Ohio; public digital culture in Amsterdam; "civil networking" in the former Yugoslavia; information technology and the international public sphere; "historical archaeologies" of community networks; "technobiographical" reflections on the future; libraries as information commons; and globalization and media democracy, as illustrated by Indymedia, a global collective of independent media organizations.

[Network Society and Future Scenarios for a Collaborative Economy](#) Jun 14 2021 This book builds on the idea that peer-to-peer infrastructures are gradually becoming the general conditions of work, economy, and society. Using a four-scenario approach, the authors seek to simplify possible outcomes and to explore relevant trajectories of the current techno-economic paradigm within and beyond capitalism.

The Information Society Reader Nov 19 2021 There has been much debate over the idea of 'the information society'. Some thinkers have argued that information is becoming the key ordering principle in society, whereas others suggest that the rise of information has been overstated. Whatever the case, it cannot be denied that 'informization' has produced vast changes in advanced societies. The Information Society Reader pulls

together the main contributions to this debate from some of the key figures in the field. Major topics addressed include: * post-industrialism * surveillance * transformations * the network society * democracy * digital divisions * virtual relations. With a comprehensive introduction from Frank Webster, selections from Manuel Castells, Anthony Giddens, Michel Foucault and Christopher Lasch amongst others, and section introductions contextualising the readings, this book will be an invaluable resource for students and academics studying contemporary society and all things cyber.

Simulation and Gaming in the Network Society Mar 12 2021

This book provides the state of the art in the simulation and gaming study field by systematically collecting excellent papers presented at the 46th International Simulation and Gaming Association annual conference held in Kyoto 17-25 July 2015. Simulation and gaming has been used in a wide variety of areas ranging from early childhood education and school-age children, universities, and professional education, to policy exploration and social problem solving. Moreover, it now been drastically changing its features in the Internet Of Things (IOT) society while taking over a wide variety of aliases, such as serious games and gamification. Most of the papers on which this book's chapters are based were written by academic researchers, both up-and-coming and well known. In addition, simulation and gaming is a translational system science going from theory to clinical cross-disciplinary topics. With this book, therefore, graduate students and higher-level researchers, educators, and practitioners can become familiar with the state-of-the-art academic research on simulation and gaming in the network society of the twenty-first century.

The Media in the Network Society Feb 08 2021 In the Network Society the development of a new communicational model has been taking shape. A communicational model characterized by the fusion of interpersonal communication and mass

communication, connecting audiences and broadcasters under a hypertextual matrix linking several media devices. The Networked Communication model is the informational societies communication model. A model that must be understood also in its needed literacies for building our media diets, media matrixes and on how it's changing the way autonomy is managed and citizenship exercised in the Information Age. In this book Gustavo Cardoso develops an analysis that, focusing on the last decade, takes us from Europe to North America and from South America to Asia, combining under the framework of the Network Society a broad range of scientific perspectives from Media Studies to Political Science and Social Movements theory to Sociology of Communication.

The Information Society and the Welfare State Jan 28 2020 The Mobile Valley - Innovation About Innovating - The Welfare of the Nation - The Local Information Society - The Power of Identity - The Finnish Model of the Information Society.

Working-Class Network Society Jan 10 2021 An examination of how the availability of low-end information and communication technology has provided a basis for the emergence of a working-class network society in China. The idea of the “digital divide,” the great social division between information haves and have-nots, has dominated policy debates and scholarly analysis since the 1990s. In *Working-Class Network Society*, Jack Linchuan Qiu describes a more complex social and technological reality in a newly mobile, urbanizing China. Qiu argues that as inexpensive Internet and mobile phone services become available and are closely integrated with the everyday work and life of low-income communities, they provide a critical seedbed for the emergence of a new working class of “network labor” crucial to China's economic boom. Between the haves and have-nots, writes Qiu, are the information “have-less”: migrants, laid-off workers, micro-entrepreneurs, retirees, youth, and others, increasingly connected by cybercafés, prepaid service, and used mobile

phones. A process of class formation has begun that has important implications for working-class network society in China and beyond. Qiu brings class back into the scholarly discussion, not as a secondary factor but as an essential dimension in our understanding of communication technology as it is shaped in the vast, industrializing society of China. Basing his analysis on his more than five years of empirical research conducted in twenty cities, Qiu examines technology and class, networked connectivity and public policy, in the context of massive urban reforms that affect the new working class disproportionately. The transformation of Chinese society, writes Qiu, is emblematic of the new technosocial reality emerging in much of the Global South.

Communication Power Feb 29 2020 Drawing on a wide range of social and psychological theories, Castells presents original research on political processes and social movements. He applies this analysis to numerous recent events - the misinformation of the American public on the Iraq War, the global environmental movement to prevent climate change, the control of information in China and Russia, Barak Obama's internet-based presidential campaigns, and (in this new edition) responses to recent political and economic crises such as the Arab Spring and the Occupy movement. On the basis of these case studies he proposes a new theory of power in the information age based on the management of communication networks.

Public Access ICT Across Cultures Nov 27 2019 A systematic assessment of the impact of public access to computers and the Internet, with findings from developing countries in South America, Asia, and Africa. Shared public access to computers and the Internet in developing countries is often hailed as an effective, low-cost way to share the benefits of digital technology. Yet research on the economic and social effects of public access to computers is lacking. This volume offers the first systematic assessment of the impact of shared public access in the

developing world, with findings from ten countries in South America, Asia, and Africa. It provides evidence that the benefits of diversified participation in digital society go beyond providing access to technology. Public access venues—most often Internet cafés in cities and state-run telecenters in rural areas—are places for learning, sharing, working, empowerment and finding opportunities. The book documents the impact of public access on individuals, on society and networks, and on women. Chapters report findings and examine policy implications of research on such topics as users' perceptions of the benefits of Internet café use in Jordan; ICT job training in Rwanda; understanding user motivations and risk factors for overuse and Internet addiction in China; the effect of technology use on social inclusion among low-income urban youth in Argentina; productive uses of technologies by grassroots organizations in Peru; use of technology by migrant ethnic minority Burmese women in Thailand to maintain ties with their culture and their family and friends; and women's limited access to the most ubiquitous type of venue, cybercafés, in practically all countries studied—and quite severely in some places, e.g. Uttar Pradesh, India. Contributing Editors Erwin A. Alampay, Roxana Barrantes Cáceres, Hernan Galperin, Abiodun Jagun, George Sciadas, Ramata Molo Thioune, Kentaro Toyama Chapter authors Ali Farhan AbuSeileek, Carolina Aguerre, Oluwasefunmi 'Tale Arogundade, Nor Aziah Alias, Sebastián Benítez Larghi, Jorge Bossio, Juan Fernando Bossio, Marina Laura Calamari, Nikos Dacanay, Jean Damascène Mazimpaka, Laurent Aristide Eyinga Eyinga, Mary Luz Feranil, Ariel Fontecoba, Omar Fraihat, Martin S. Digital Middle East Dec 29 2019 In recent years, the Middle East's information and communications landscape has changed dramatically. Increasingly, states, businesses, and citizens are capitalizing on the opportunities offered by new information technologies, the fast pace of digitization, and enhanced connectivity. These changes are far from turning Middle Eastern nations into network societies, but their impact is significant. The growing adoption of a wide variety of information technologies and new media platforms in everyday life has given rise to complex dynamics that beg for a better understanding. *Digital Middle East* sheds a critical light on continuing changes that are closely intertwined with the adoption of information and communication technologies in the region. Drawing on case studies from throughout the Middle East, the contributors explore how these digital transformations are playing out in the social, cultural, political, and economic spheres, exposing the various disjunctions and discordances that have marked the advent of the digital Middle East.

Proceeding of the International Science and Technology Conference "FarEastCon 2019" Jun 22 2019

This book presents the proceedings of the International Science and Technology Conference "FarEastCon 2019," which took place on October 1-4, 2019, in Vladivostok, Russian Federation. The conference provided a platform for gathering expert opinions on projects and initiatives aimed at the implementation of far-sighted scientific research and development, and allowed current theoretical and practical advances to be shared with the broader research community. Featuring selected papers from the conference, this book will be of interest to experts in various fields whose work involves developing innovative solutions and increasing the efficiency of economic activities.

Internet and Democracy in the Network Society Jul 28 2022

A seminal shift has taken place in the relationship between Internet usage and politics. At the turn of the century, it was presumed that digital communication would produce many positive political effects like improvements to political information retrieval, support for public debate and community formation or even enhancements in citizen participation in political decision-making. While there have been positive effects, negative effects have also occurred including fake news and other political disinformation, social media appropriation by terrorists and extremists, 'echo-chambers' and "filter bubbles", elections influenced by hostile hackers and campaign manipulation by micro-targeting marketing. It is time for critical re-evaluation. Designed to encourage critical thinking on the part of the student, internationally recognized experts, Jan A.G.M. van Dijk and Kenneth Hacker, chronicle the political significance of new communication technologies for the promotion of democracy over the last two decades. Drawing upon structuration theory and network theory and real-world case studies from across the globe, the book is logically structured around the following topics: Political Participation and Inclusion Habermas and the Reconstruction of Public Space Media and Democracy in Authoritarian States Democracy and the Internet in China E-government and democracy Views of democracy and Internet use Underpinned by up-to-date literature, this important textbook is aimed at students and scholars of communication studies, political science, sociology, political communication, and international relations.

Society and the Internet Feb 20 2022 How is society being reshaped by the continued diffusion and increasing centrality of the Internet in everyday life and work? Society and the Internet provides key readings for students, scholars, and those interested in understanding the interactions of the Internet and society. This multidisciplinary collection of theoretically and empirically anchored chapters addresses the big questions about one of the

most significant technological transformations of this century, through a diversity of data, methods, theories, and approaches. Drawing from a range of disciplinary perspectives, Internet research can address core questions about equality, voice, knowledge, participation, and power. By learning from the past and continuing to look toward the future, it can provide a better understanding of what the ever-changing configurations of technology and society mean, both for the everyday life of individuals and for the continued development of society at large. This second edition presents new and original contributions examining the escalating concerns around social media, disinformation, big data, and privacy. Following a foreword by Manuel Castells, the editors introduce some of the key issues in Internet Studies. The chapters then offer the latest research in five focused sections: The Internet in Everyday Life; Digital Rights and Human Rights; Networked Ideas, Politics, and Governance; Networked Businesses, Industries, and Economics; and Technological and Regulatory Histories and Futures. This book will be a valuable resource not only for students and researchers, but for anyone seeking a critical examination of the economic, social, and political factors shaping the Internet and its impact on society.

Theories of the Information Society May 14 2021 Popular opinion suggests that information has become a distinguishing feature of the modern world. Where once economies were built on industry and conquest, we are now instead said to be part of a global information economy. In this new and thoroughly revised edition of his popular book, author Webster brings his work up-to-date both with new theoretical work and with social and technological changes - such as the rapid growth of the internet and accelerated globalization - and reassesses the work of key theorists in light of these changes. This book is essential reading for students of contemporary social theory and anybody interested in social and technological change in the post-war era.

The Network Society Aug 17 2021 The last three decades have witnessed a dramatic acceleration in the use, demand, and need for telecommunications, data communication, and mass communication transmitted and integrated into networks.

Through a synthesis of contemporary theories about modernization, this book offers a broad-ranging introduction to the 'network' society in all its aspects.

[The Wealth of Networks](#) Dec 09 2020 Describes how patterns of information, knowledge, and cultural production are changing. The author shows that the way information and knowledge are made available can either limit or enlarge the ways people create and express themselves. He describes the range of legal and policy choices that confront.

Information Systems and Technology for Organizations in a Networked Society Sep 17 2021 "This book discusses methods of using information technologies to support organizational and business objectives in both national and international contexts, describing the latest research on both the technical and non-technical aspects of contemporary information societies, including e-commerce, e-learning, e-government, and e-health"-- Provided by publisher.

Manuel Castells May 26 2022 It has earned him favourable comparisons to Marx and Weber.

Mobile Communication and Society Oct 07 2020 How wireless technology is redefining the relationship of communication, technology, and society around the world—in everyday work and life, in youth culture, in politics, and in the developing world. Wireless networks are the fastest growing communications technology in history. Are mobile phones expressions of identity, fashionable gadgets, tools for life—or all of the above? Mobile Communication and Society looks at how the possibility of multimodal communication from anywhere to anywhere at any time affects everyday life at home, at work, and at school, and raises broader concerns about politics and culture both global

and local. Drawing on data gathered from around the world, the authors explore who has access to wireless technology, and why, and analyze the patterns of social differentiation seen in unequal access. They explore the social effects of wireless communication—what it means for family life, for example, when everyone is constantly in touch, or for the idea of an office when workers can work anywhere. Is the technological ability to multitask further compressing time in our already hurried existence? The authors consider the rise of a mobile youth culture based on peer-to-peer networks, with its own language of texting, and its own values. They examine the phenomenon of flash mobs, and the possible political implications. And they look at the relationship between communication and development and the possibility that developing countries could "leapfrog" directly to wireless and satellite technology. This sweeping book—moving easily in its analysis from the United States to China, from Europe to Latin America and Africa—answers the key questions about our transformation into a mobile network society.
